

# EDAG Holding Sdn Bhd

EDAG connects people with the future of mobility, new technologies and standards such as eMobility, autonomous driving, connectivity and digitalisation.

With over 8,000 employees spread over 60 locations in 17 countries we are providing global world-class engineering services to our customers.

Our industry offers many opportunities - to use them for us and our customers, we need you! Each of us has talents and gifts. We help you to develop your full potential: With the necessary tools, agile working methods and future-oriented continuous training options plus career programs.

But, above all, a culture of appreciation, respect and recognition in a safe and reliable work environment. Helping you to be the best and achieve your career goals gives us the opportunity to be and remain the leading engineering services provider in the global automotive industry.

This is how we reach our goals together.

## Backend Software Developer – Mobility IT

### DO YOU WANT TO SHAPE THE FUTURE OF MOBILITY?

#### **This will make you grow:**

You will be part of a diverse global team developing Backend Software for Automotive projects from concept through to implementation and validation.

Your tasks will include backend design and coding for our customer apps and services. You will apply AWS or Azure Cloud Webservice solutions and ensure data readiness based on (No)SQL and frameworks like Java Spring Boot.

Furthermore you will provide support with the implementation of user-friendly systems (Dev/Ops).

This is a great opportunity for you to participate in the advancement of our global IT software development organization and influence future trends.

.

#### **This is how you will take us forward:**

- Candidate must possess a Bachelor's Degree or Master's Degree in Computer Science (or comparable degree).
- Knowledge of and ideally some practical experience with Java/ Kotlin Spring Boot programming languages.
- First virtualization experiences with Docker Container / Kubernetes and Jenkins or Concourse configurations for Build Pipeline optimization.

- Good communication skills in English (written and spoken).
- Passion for IT Development and working in agile teams
- Fresh graduate engineers will also be considered.

**Our compensation package includes:**

- Competitive salary structure in line with experience and qualifications
- Group Term Life and Hospitalization Insurance Schemes
- Overtime
- Other fringe benefits

Interested candidates are invited to email their detailed CVs stating qualifications, experience, current and expected salary and contact nos, together with one passport sized photograph (n.r.).
